

the OSSO system

the OSSO system

description

The OSSO system is strong in aesthetic, minimalist in design and elegant. Due to its unique pressure fit which required no drilling into floor or ceilings it is ideal for use with wood or ceramic floors or decorative ceilings.

how it works

The OSSO bearing bar is manufactured in extruded aluminium and works on a floor to ceiling pressure fit system. Simply put the bar in place and wind out the top and bottom foot and the bar remains vertically in place.

doors

Hinged or Sliding doors are both available as part of the system, they can be part of a run of panels or used on their own in stud work openings

plasma screen

The plasma screen attachment is a major selling part of the Osso system, it allows the user to attach 1 or 2 screens to just 2 bars.

The bars can be located against a wall or in the middle of a space.

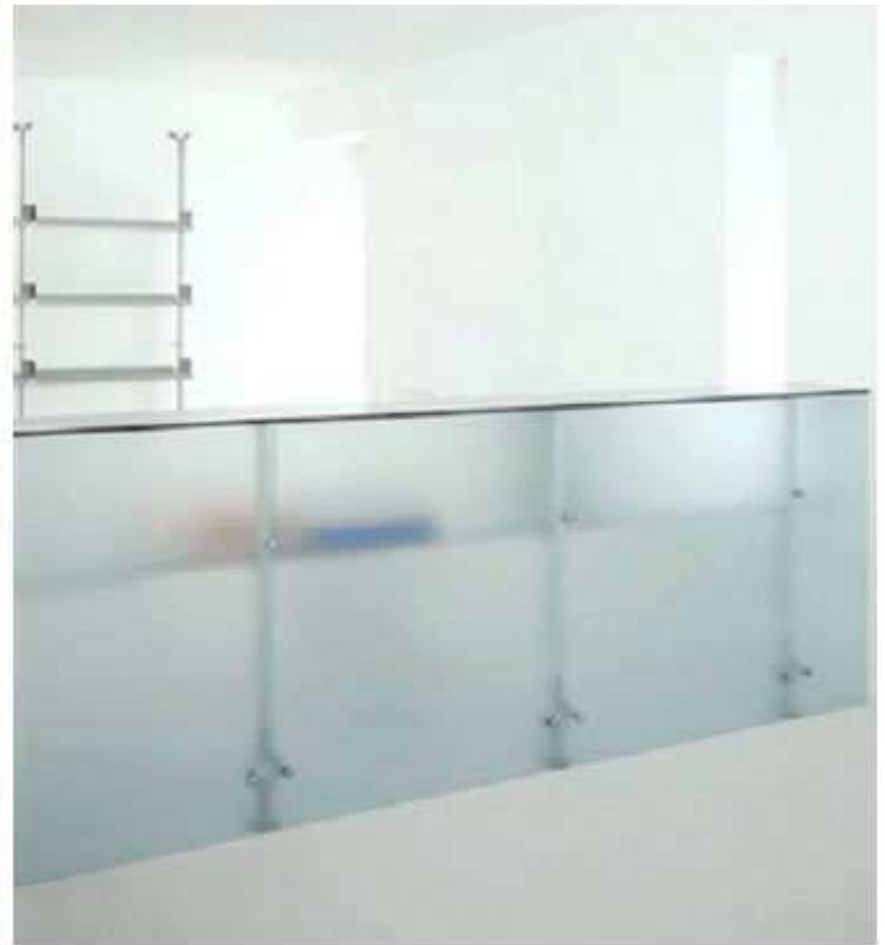

shelving

Osso system offers a wide variety of shelf attachments, from ribbed aluminium shelves (as shown opposite) to timber or acrylic.

reception desk

Glass fronted 'bespoke' reception desks, can be made to any size, front panels in any standard Osso glass finish – frosted, painted, acrylic etc.
